

HIGHLIGHT MAKER HOOPS ★ INSTANT RESULTS TABLE

This table is designed to quickly simulate games, with one dice roll determining the winner of each contest. This is useful, for instance, when playing a single-team replay, to keep season-in-progress standings for the entire league. To use the chart, locate the HOME team's winning percentage, and then cross-reference its opponent's. **The number indicated represents the home team's 11-66 "win range" for that game** (we've left off the "11" for space reasons). Roll both dice; if the dice roll is at or below the home team's "win range" number it wins the game. A roll higher than the "win range" give the visiting team a road win. EXAMPLE: 1995-96 Chicago (with a winning percentage of .878) hosts Dallas (with a winning percentage of .317). Cross-referencing Chicago's percentage at home with Dallas' percentage on the road generates a "win range" of 11-65 for Chicago. A roll within that range gives Chicago a home win. A roll of 66 gives Dallas an upset road win. NOTE that if Dallas were playing at home, it would have a "win range" of 11-13. **Results of "X"** are listed for prohibitive favorites; if an "X" result is generated when comparing the team winning percentages, the team with the higher winning percentage is given a "win range" of 11-66. However, if a "66" is rolled, roll again, with a new win range of 11-43 for the home team.

Road Team Winning Percentage...
